DEALERS IN FINE ART SINCE 1826

Distraction / Abwechslung  
31 August 2023

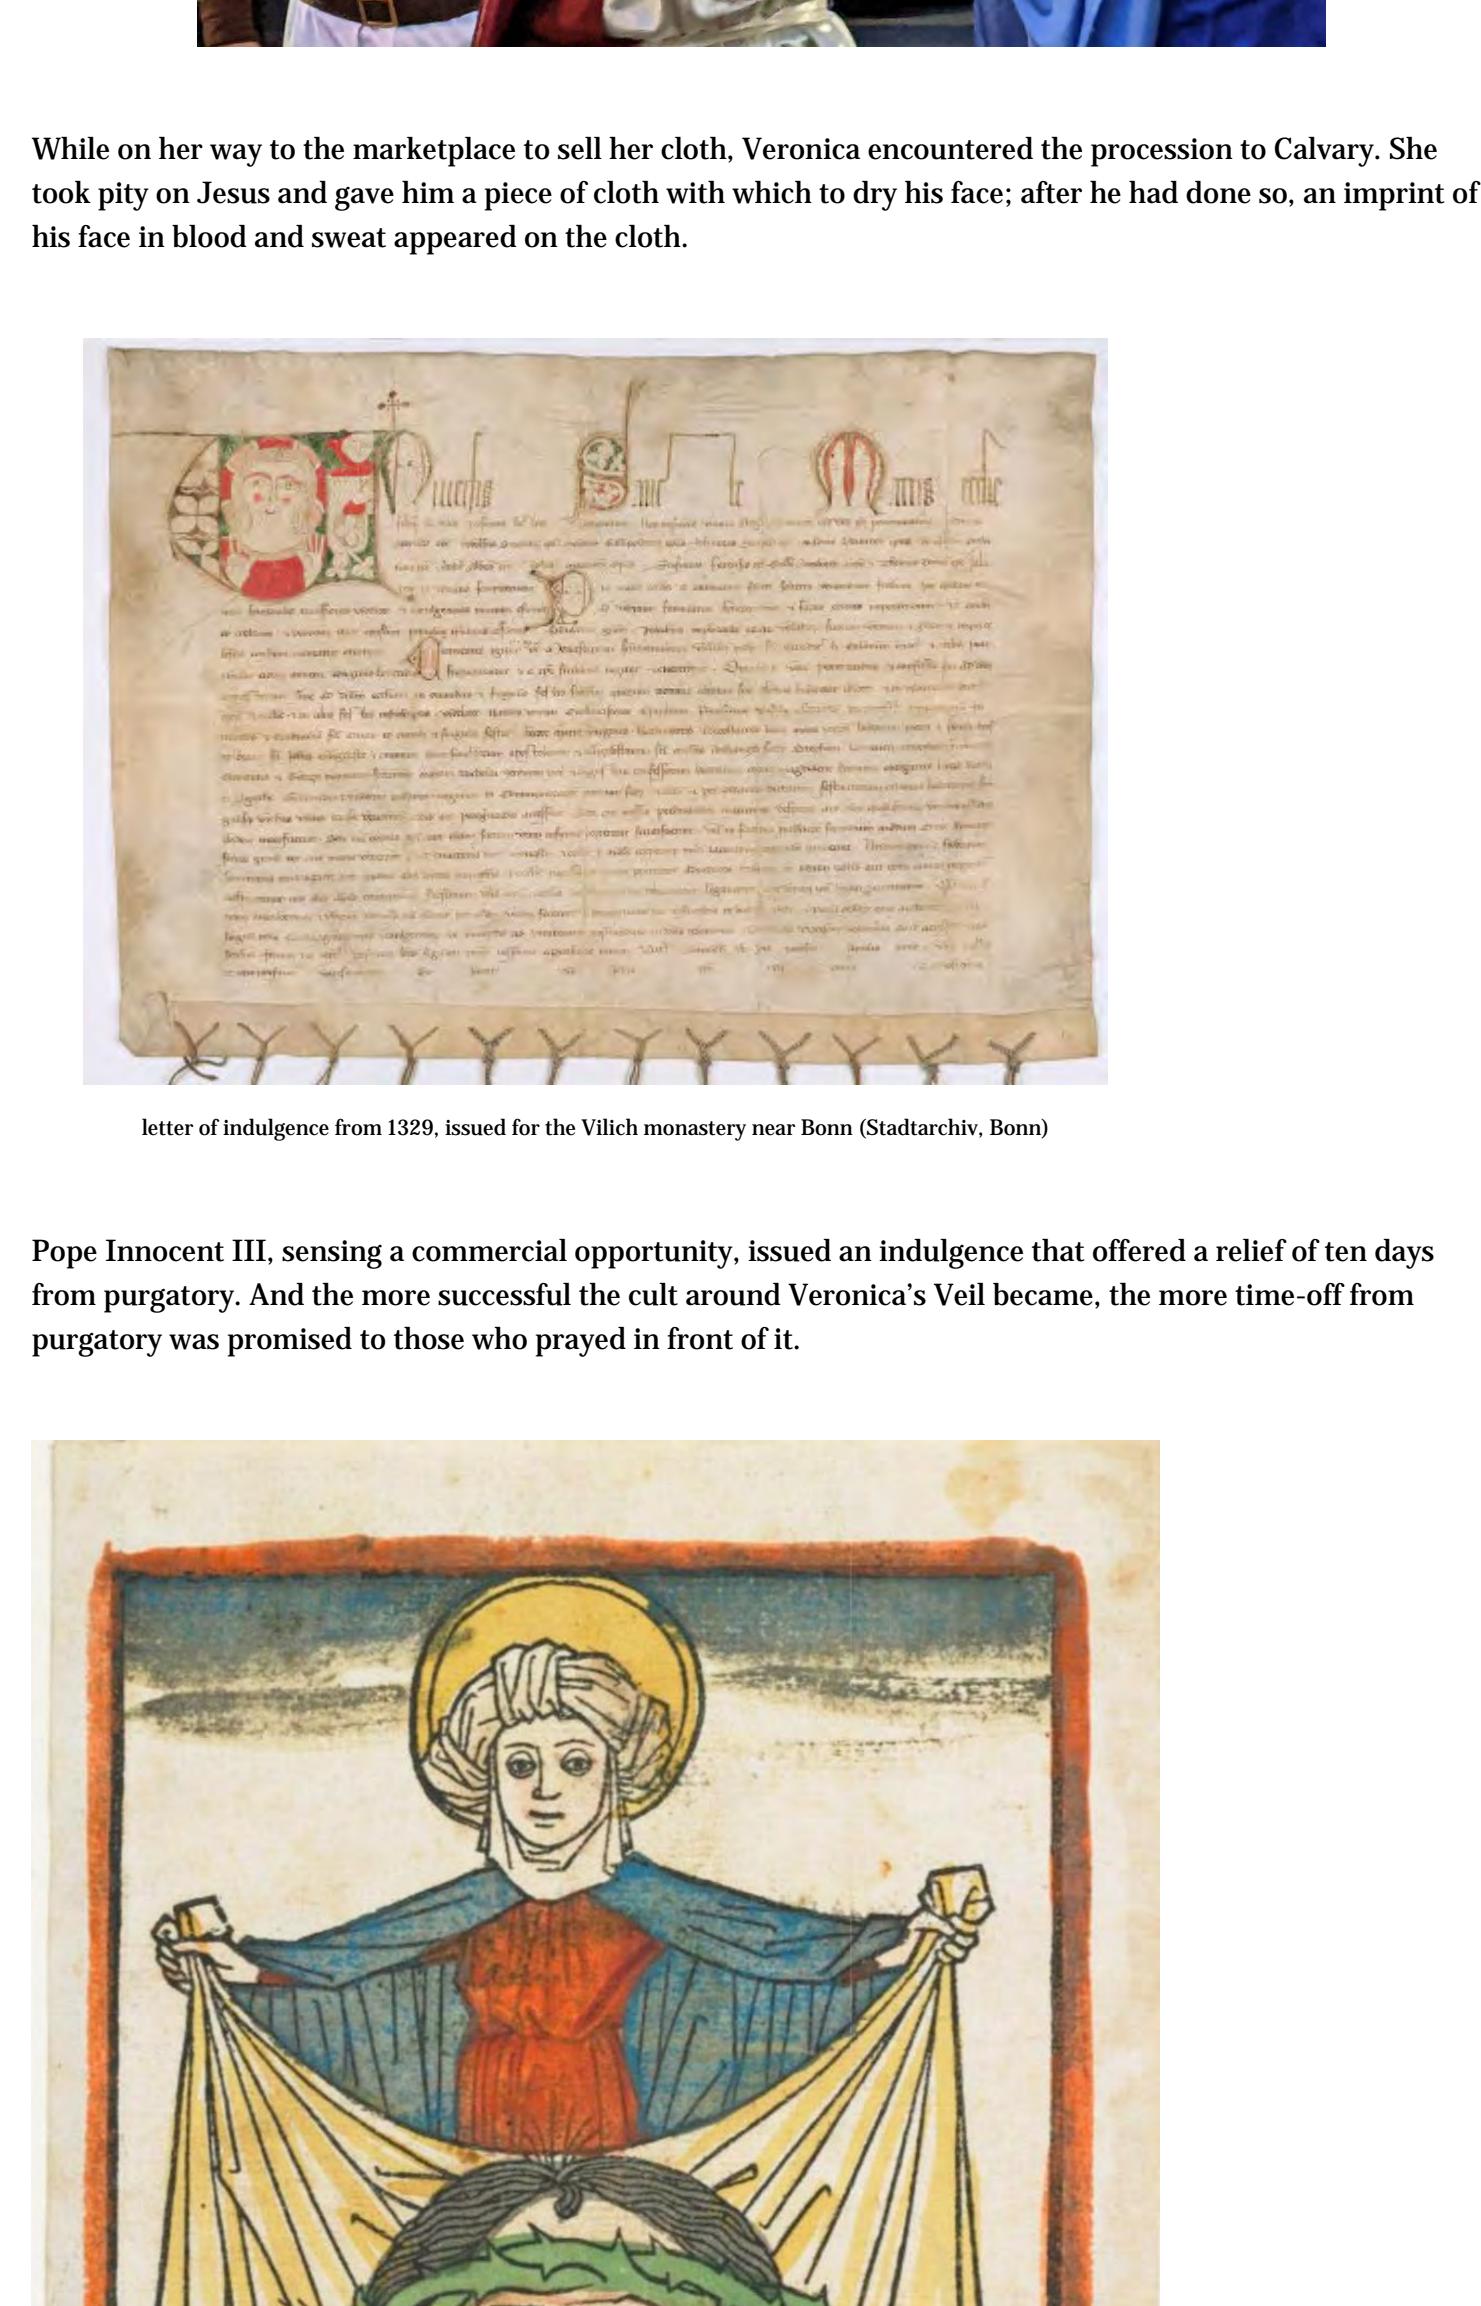

Since Donald Trump was first indicted back in March of this year for one of his numerous alleged crimes, images began to appear showing the former president in mug shots or behind bars. More often than not, he is dressed in a color that also happens to perfectly match his hairdo as well as his complexion. And thanks to the omnipresence of the late-capitalist market in the form of multiple sales platforms, countless vendors seized the opportunity to offer endless variations of these images imprinted on a wide variety of merchandise, from T-shirts to mugs and stickers, their entrepreneurial initiatives further boosted by the fact that the potential market is as united as the United States are not. Emblazoned with "NOT GUILTY," these tchotchkies appeal to roughly one half of the population, while the other half can opt for the logo "GUILTY A[s] F[uck]."

The merchants do not care either way, any more than certain artists did in times past. Lucas Cranach, a friend of Martin Luther, evidently had few qualms to fulfill what was arguably the largest painting commission of the day for the newly founded collegiate church in Halle. The patron was Elector Cardinal Albrecht von Brandenburg, whom Luther liked to refer to as the *Abgott von Halle* (*Abgott* means idol, but definitely not in the celebratory sense of "American Idol").

While, starting in 1520, the workshop embarked on the production of dozens of altarpieces consisting of some 180 paintings, Cranach jotted down the designs for the comic-strip-like woodcuts illustrating Martin Luther's *Passional Christi et Antichristi* to be published the following year.

The pamphlet exposed the excesses of the Roman Church and the Pope, whom Luther condemned as "the real Anti-Christ." His foremost German representative in the German lands, however, was none other than Albrecht von Brandenburg, Cranach's patron.

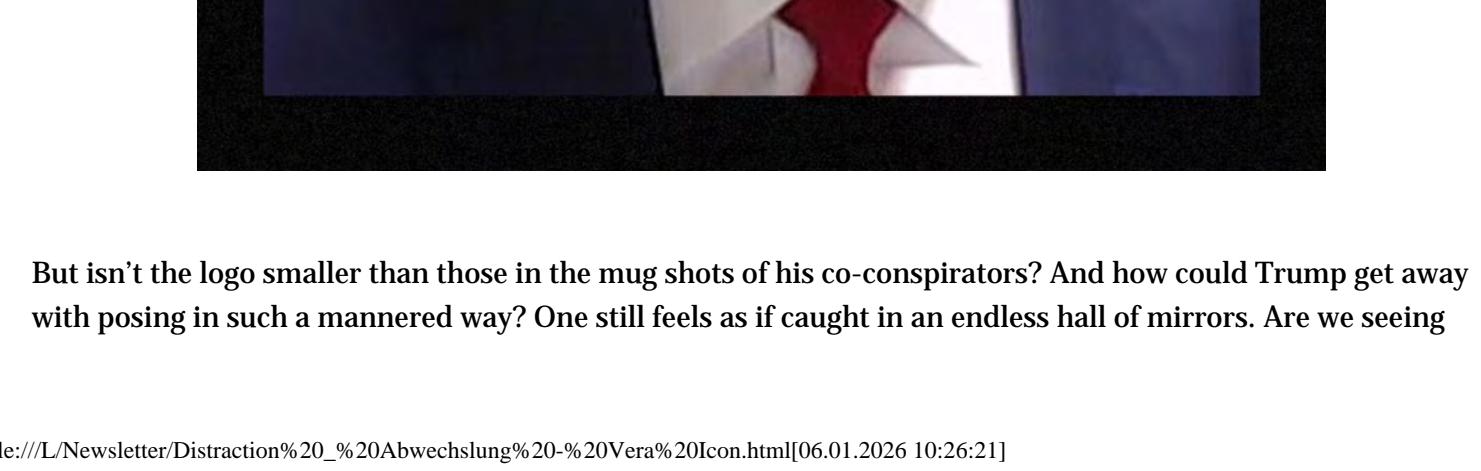

[Note: The art-historical discipline clearly remains somewhat unreconstructed since many scholars see Cranach's refusal to take a clear side in the culture wars of his time as evidence of opportunism. Given the savviness of today's corporations which bring in all the correct credentials to decorate the gleaming lobbies of their headquarters, one might want to look at the historic situation in a different way. How about interpreting Albrecht von Brandenburg's recruiting of Cranach as an indication of virtue signaling?]

Hero worshipping as well as its flipside, the visual defamation of one's opponent, is probably as old as image making. More recently, though—and I am referring here to roughly the last three millennia—this primeval urge has been substantially impeded, in Western culture at least, thanks to the second Mosaic commandment that "thou shalt not make unto thee any graven image, or any likeness of anything that is in heaven above" (Exodus 2:4–5). This made it difficult for such newcomers as the fledgling sect of Christians to adorn their message with pictures, especially since their hero, whom they believed to be the Messiah, had been murdered, risen from the dead, and vanished to heaven. There was nothing left to venerate save the blood-stained tools of his torture and death, and his foreskin (he was, after all, a Jewish boy). This required a certain resourcefulness on behalf of the vendors of devotional images and knickknacks of all sorts. It has occasionally been quipped that all splinters of the holy cross combined would make a great ship or even a forest dense enough to cover Mount Golgotha. (As to the Holy Precupe: During the Middle Ages, depending on which study one follows, there were eight, twelve, fourteen, or even eighteen different holy foreskins in various European towns, all of which claimed to own the real thing.)

But what about images of Jesus himself? As son of God, he did fall under that unhelpful sanction writ in stone. Fortunately, there have always been think tanks eager to bend the rules. Those early Christian scholars followed the example of the Talmudic Bible commentators and were adept in "close reading" as later on the "New Critics" who dominated the literature faculties of the 1980s. Their solution was to point out that what the law explicitly forbids was not the images per se but their making. All that needed to be found were what the learned writers called *acheiropoietika* (Greek *a* = without, *cheir* = hand, *poiein* = to make; *non manufactum* in Latin), images "not made by human hands."

Starting in the sixth century, at a time when Christianity had already become the Roman Empire's state religion, various legends began to circulate of such miraculous images. One tells the story of King Abgar of Edessa (now Urfa, in Turkey) who fell ill and wondered if Jesus might be able to help him. His messenger Ananias happened to be a painter and, since Jesus was unavailable, he tried, but failed, making at least a portrait of him to bring back to his king.

Yet when Christ washed his face and dried it with a cloth, the cloth retained his likeness. Instead of a portrait, the uninitiated painter-messenger brought this *mandylion* from Arabic *mantid* for veil and Latin *mantellum* for small cloth (after he had given up the cloth and had to make a new one). To defuse his own blunder, he claimed that the image had been painted on the cloth by the Holy Spirit. Talk about a win-win situation! Most venerated reliquary and, until the sack of the city after the Third Crusade, the *Veil of Veronica* was treasured in the Holy Sepulchre in Jerusalem, where it was venerated as the "real Anti-Christ."

Conveniently, a different *acheiropoieton* was soon discovered: The Veil of Veronica, also known as the *sudarium* from Latin *sudor* for sweat. It has different origin stories found in the gospels and elsewhere, including one suggesting that it preserved Christ's likeness when he sweat blood on the Mount of Olives.

While on her way to the marketplace to sell her cloth, Veronica encountered the procession to Calvary. She took pity on Jesus and gave him a piece of cloth with which to dry his face; after he had done so, an imprint of his face in blood and sweat appeared on the cloth.

If anyone thinks this brief excusus into the origins of the *vera icon* is blasphemous in this context, please do remember that the recent Trump campaign was as adept in "close reading" as later on the "New Critics" who dominated the literature faculties of the 1980s. Their solution was to point out that what the law explicitly forbids was not the images per se but their making. All that needed to be found were what the learned writers called *acheiropoietika* (Greek *a* = without, *cheir* = hand, *poiein* = to make; *non manufactum* in Latin), images "not made by human hands."

With the advent of printmaking in the fifteenth century, a totally new way of maximizing profit beyond merely boosting Rotten's tourist industry opened up—long as that unfortunate Second Commandment was conveniently forgotten. The first print of the *Veronica* was issued in 1453, in Nuremberg, by the printer Anton Koberger, and it was an instant success. It was followed by a series of replicas, copies of copies, and so on, until the *Veronica* had become a global commodity, a true *icon* in the sense of the word.

From Innocent III, sensing a commercial opportunity, issued an indulgence that offered a relief of ten days from purgatory. And the more successful the cult around it became, the more time-off it was promised to those who prayed in front of it. *Veronica's Veil* became the *Veronica* of the *Veronica*—the *Veronica* of the *Veronica*.

While on her way to the marketplace to sell her cloth, Veronica encountered the procession to Calvary. She took pity on Jesus and gave him a piece of cloth with which to dry his face; after he had done so, an imprint of his face in blood and sweat appeared on the cloth.

Veronica—a note the anagram: *Veronica* / *vera icon* (true image)—entered the Passion narrative. Around 1300, in the influential Bible of Roger of *Argenteuil*, the story had obtained its canonical form:

While on her way to the marketplace to sell her cloth, Veronica encountered the procession to Calvary. She took pity on Jesus and gave him a piece of cloth with which to dry his face; after he had done so, an imprint of his face in blood and sweat appeared on the cloth.

“the real Donald” or a carefully studied posture? And if the latter, did nobody in the TIC foresee what a witty commentator on what-was-formerly-known-as Twitter immediately pointed out, namely that Trump’s forward-tilted stare at the camera does not make him look tough and defiant but like someone at the peak of derangement in a Stanley Kubrick movie? Could this perhaps even be the intention?

All possible interpretations apply. The new *vera icon* is un-predetermined and can be used in any way marketable: “Never surrender!” or “I will get you after all!” or “He’s totally lost it!” Take your pick. What counts is the attention, and the money that it washes into the campaign coffers (not least to fight those lawsuits, especially since there are probably more to come). In his analysis of the mugshot as “Portrait of a Frightened Boy-Man” in *Hyperallergic*, David Levi Strauss mentions a fundraising email sent out soon after “the mug shot seen around the world” was posted. In it, Trump petulantly blames “many of those vendors [who] are just trying to profit off of President Trump’s persecution without even supporting him! Not nice!” Perhaps it is here that a glimpse of “the real Donald” finally emerges in what is yet another farcical and well-rehearsed performance of defiant bluster. And yes, it is truly not nice.
